With Validato you can

Leverage Pre-Built Attack Simulations

Access a library of 100s attack scenarios based on known cyber threat scenarios.

Test Safely In Production

Test your devices without disrupting your current environment.

Access Guided Remediation Advice

Harden vulnerable areas of your environment with step-by-step configuration and remediation instructions.

Key Features And Benefits

Easy Implementation

Set up users and create a testing agent in a few simple steps.

Fast validation with instant results

Choose a suitable scenario and initiate tests with just a few clicks wherever you need, obtaining your security status results the same day.

Transfer know-how

Grant your team access to extensive know-how on attack techniques and mitigation methods.

Validato Usecases

1. Verification of existing security
2. Validation of new security software
3. Audit of logging system
4. Review of alerts from NÚKIB

Strengthen Your Team's Preventive Cybersecurity Defenses

Prioritise Security Investments

Focus resources on areas most vulnerable to attacks.

Develop Threat-informed Defense

Base security decisions on actual attacker behavior.

Address remediation independently

Strengthen vulnerable areas through detailed configuration and remediation guidance.
